Experienced in Dubai Metro

Career Objective:

To become a professional Electronics and Communication Engineer and prove my talent and abilities in exerting my best effort with honesty and sincerity, long term career commitment and job security based on performance and the highest possible standard in any assignment undertaken.

Summary:

- **Having 11 ½ years of experience in Electronics & Communication/ Metro Rail/Security System Industry.**
- **Rich hands-on experience on CCTV, ACS, IAS, PAS, PIS, SACADA, OCS and MSN network systems.**
- Execution of the projects and Maintenance of Telecom Systems in Metro Rail Projects and liaising closely with presales & procurement, project review, planning, staffing, control, handing over.
- Goal-oriented, multi-tasking professional with wide range of skill sets as well as strengths in technology, critical thinking, troubleshooting, problem analysis and resolution.
- Proven capability to Manage Operation and Maintenance Teams.
- Extensive experience in implementing HSE protocols in Projects & Maintenance and providing administrative and technical support to ensure smooth operations.
- Skilled in implementing quality norms and initiating cost rationalizing measures to optimize operational efficiency
- True Team leader, trainer and motivator with fine-tuned analytical and troubleshooting skills and excellent communication skills.

Educational Qualification:

- B. Tech in Electronics & Communication (distance) from Rajasthan University.
- Diploma in Electronics & Communication from B.G.T.I, Mumbai.

Skills & Competencies:

- Project management and Maintenance management.
- **Metro Rail Telecom Systems Installations and Maintenance.**
- Team building, Team management, delegating responsibilities and organizational skills.
- Decision making, Problem solving and conflict resolution.
- Ability to receive feedback and implement change, able to introduce new processes to a team.

Work Experience:

Group 4 Security Services, Dubai

Role: Operations and Maintenance Lead Dubai Metro Project (July 2013 – Till Date)

The purpose of this position to design, test, commission and integrate additional CCTV cameras in accordance with RTA & Dubai Police requirement in Dubai Metro Red and Green line.

Design:

- Reviewing the design for the CCTV sub-system and reviewing of project product and installation cost.
- Decompose requirements and document architecture decisions, linking the former to the latter, ensuring and proving design compliance with defined requirements or industry standards (System Architecture).

- Coordinate the production of the Verification & Validation Plans to ensure that all System Requirement Specifications are incorporated.
- Verify requirements, scope, and technical solution for CCTV systems (System Definition).
- Acceptance and approval of the Project design & method statements by the client.
- Review of Final CCTV design documents / technical work scopes, ensuring they are consistent with the tender specifications and requirements.
- Ensure compliance with system requirements through clearly documented and traceable verification and validation methods.

Testing:

- Coordination, development, integration of test activities, for internal CCTV components.
- Apply proven analytical, communication, and problem-solving skills to identify, communicate, and resolve technical incompatibilities and ensure integration and interoperability across all subsystems comprising the overall CCTV system.
- Review sub-contractors' inspection and test plans, programs and packages before accepting them for use to ensure they are safe and appropriate.
- Analysis to identify and justify improvements to testing and commissioning requirements, method statements.
- Arrange for pre-commissioning meetings to brief staff on duties during commissioning and known safety hazards and for them to assess any site specific safety issues associated with completing their duties.
- Overall supervision of testing process followed by contractor on successful installation based on the approved design from the client before CCTV System is tested along with other systems as a part of Integrated Testing & Commissioning.
- Conduct post-testing meetings to evaluate the effectiveness of the planning and implementation of the works and to make recommendations on improvements to processes or procedures.
- Monitoring and controlling the processes in accordance to the Systems Integration, Testing & Commissioning Plans, Testing & Commissioning Program, standards requirements and good engineering practice during:
 - Factory Acceptance Testing at various Manufacturer locations
 - Onsite Subsystems Testing
 - Interface Subsystems Testing

Commissioning:

- Ensure the delivered sub-system functions technically as anticipated by the client (System Delivery).
- Ensure suitably accredited resources are used to implement the inspection, testing and commissioning program.
- Facilitate commissioning to ensure all necessary activities are completed, including follow-up of those to be completed post-commissioning.
- Implement the Handover Documentation Package (Taking over certificate, Safety Certificate, etc) to ensure Regional requirements are met for satisfactory work completion.

SERCO Middle East - Dubai

(OCT 2012 to June 2013)

Role: Team Leader (Automated People Mover Dubai Airports)

- Supervise and lead maintenance of Signaling and Communication systems installed in Stations and On Board (Train).
- Scheduling and performing preventive and corrective maintenance.
- Coordinating with third party contractors for different activities.
- Leads and assists, as required a team of technicians and/or maintenance support team to carry out preventive and corrective maintenance works, as well as fault rectification, diagnostic tests, trouble-shooting

and upgrading and improvements works. These systems include Signaling and Train Control, Communications, SCADA, CCTV, Radio, and Track Beam Switches.

- Supervise the installation, servicing and repairing of the above mentioned systems, located at (OCC) Operations Control Centre, (SER) Signaling Equipment Room, at trackside locations and on-board trains.
- Ensure the team uses the appropriate hand and electrical tools, power machine, electrical and electronic testing equipment and references to necessary technical drawings, signaling schematics, operations and maintenance manuals, procedures and instructions when performing repair and maintenance work;
- Supervise the replacement of faulty signaling equipment, handover/taken back to the electronics workshop for repair.
- Provides technical advice, information, and instructions to other technical staff and trainees and ensures all drawings, diagrams, manuals and records are properly kept and maintained current and updated.
- Lead systems and communications engineer in conducting engineering and safety analysis, investigations and tests.
- Provides logistic support and maintenance control duties.
- Undertakes any other tasks or functions that are incidental or ancillary to the performance of assigned work.
- Produce and maintain accurate maintenance records of the various system and equipment performance, work accomplished and other information in the CMS experience log book;
- Assist subordinates with the job familiarization and provide training and assessment where required.
- Conduct performance reviews for Systems and Communications Technicians.
- Responsible for the efficient and safe evacuation of trains & station in the event of fire or other emergency situations when directed by the Duty Operations and Maintenance Manager;

HSQE Responsibilities and Information Security Responsibilities

- Awareness of the Integrated Management System and the content of the Health, Safety, Quality & Environment and Information Security Policy Statements;
- Understanding of personal responsibilities and contribution to achieving compliance with the Integrated Management System requirements, (including but not limited to competence to perform safety critical roles, legal requirements, control measures arisen from environmental impacts and aspects, job safety analysis and information security risk assessment) and the potential consequences of departure from the arrangements in place to deliver the commitments stated in the policies statements above;
- To exercise a personal duty of care for their own health, safety and welfare and for those affected by their acts or omissions;
- To use safety equipment (including PPE) as required and intended and observe that this is also enforced among subcontractors and third parties working in Serco's controlled premises/systems
- Promote a good HSQE and Information Security culture among their peers, subcontractors and third parties;
- Protect information assets and data including both electronic and paper based from all threats whether internal, external, deliberate or accidental.

SERCO Middle East - Dubai Metro

(May 2009 to Sept 2012)

Role: Communication Engineer (ATC & Communication Systems)

The purpose of this position is to provide, Preventive and Corrective maintenance services covering the **Communication System** for **Dubai Metro Railway System**.

- Maintenance of the Communication Systems like OCS Server & SCADA, , MSN (Multi Service Network), Narrow Band Radio (NBR), SDH/PDH & Broad Band Radio (BBR), TEL/ PABX, CCTV Server, PAS/PIS Server, Intrusion Alarm System(IAS) & Time Distribution System (TDS).
- Inspection of Communication Equipment through OCS (Operation Control System Software, & managing the OCS & SCADA.

- Maintenance of On Board Communication Equipment like IP Camera, LCD's, CCTV Server, Video Broadcast Server, On Board Control Unit (OBCU), Integrated Calling Console Passenger Information Display, Passenger Announcement, Train Radio Control systems.
- CCTV solution based on Pelco IP Cameras and Endura VMS consisting of NVR, NSM, SEB's
- Installation, Testing and Commissioning of Communication systems and Security systems.
- Configuration and important software updates of all communication systems and security systems.
- Provide Support to Operations Department in all communication related faults during Revenue service & Engineering Hours in Trains, Depot & Station premises.
- Liaise with OCC Staff & Eng. Controller for co-ordination during testing and troubleshooting of Trains with Communication problems.
- To carry out day to day CM and PM of Communication Equipment (1M, 3M, 6M and Yearly) in the Depot, Station premises, Station Equipment Room, Wayside Tracks, Trains and Station Master Office as per Maintenance Management Systems Plan.
- Switchover Test OCC-BOCC for all communications systems.
- Manage and ensure the implementation of the preventive and corrective maintenance of the OCC, BOCC, Station Communication system and related features.
- Comply with the Serco and RTA's quality standards and requirements.

Reliance Communication, Mumbai

(April 2007 to May 2009)

Role: Network Engineer/CCTV Project Engineer

Trainings:

- CCTV, DVVR, SDH/PDH, MSN, PABX, IAS, PIS/PAS, FON, OCS & TETRA.
- Operations & Maintenance Trainings of different Communication Systems.
- IOSH, Safety Communications.
- Milestone Certified
- Fault Management Training
