

Sujith Barathi T

FPGA

Career Objective

To pursue a challenging career and to be a part of progressive organization that gives me scope to enhance my knowledge and utilizing my skills towards the growth of organization.

Professional Training

Undergoing training in **Professional Diploma in VLSI Design and Verification** from Cranes varsity a Training Division of Cranes Software International Ltd

Projects

Traffic Light Controller On FPGA.

Developed a traffic light controller using FPGA technology, programmed in Verilog. Simulated the design with Vivado and synthesized it on Xilinx/Altera FPGAs. Integrated sensor inputs for adaptive control and ensured reliable operation.

- Tools : VIVADO,FPGA.
- GitHub : [github.Project_link](#).

Design and Verification UART (Universal Asynchronous Receiver and Transmitter) Protocol

This Project is developed a Verilog based UART (Universal asynchronous Receiver Transmitter) and demonstrates its working by interfacing it to Microsoft Windows hyper terminal. So UART is device that has capability to both receive and transmit serial data. For transmission the UART protocol wraps this 8-bit data.

- Tools : EDA Playground.

VANET- Vehicular Ad hoc Network

VANET connects vehicles wirelessly, creating a decentralized network where each vehicle acts as a node, communicating directly with others without central infrastructure. Vehicles gather and share data like speed, location, and traffic conditions in real-time, enhancing driving safety and providing live updates on road situations. The data supports collision avoidance, traffic management and vehicle-to-infrastructure communication.

EDUCATION

2020 - 2024

Thanthai Periyar Government Institute of Technology

- Bachelor of Engineering
- Electronics and Communication
- CGPA: 7.7 / 10

SKILLS

- Verilog
- System Verilog
- FPGA
- VIVADO
- EDA
- UART
- I2C

LANGUAGES

- English (Fluent)
- Kannada (Intermediate)
- Tamil (Advanced)
